

Maintenance of water purification system / wastewater treatment system

A variety of water treatment systems utilizing advanced technology have been developed in Japan, and their utilization is expected in various parts of the world. However, for those systems, the original functions and abilities are exhibited by continuous operation adjustment and maintenance. Especially in Southeast Asia, these maintenances are not widespread, and after the introduction, engineers with specialized knowledge will respond only at the beginning of the introduction. No matter how good the technical product is, after that, troubles occur over time, and the driving situation is such that it does not fully function. We provide regular maintenance by professional engineers, and through the training of these engineers locally, we provide maintenance that can demonstrate and utilize the original abilities of Japan's advanced technical system.

- Water purification system maintenance

We provide comprehensive services related to water treatment, from survey / diagnosis of water purification system to design, procurement / construction, operation / maintenance.

- Wastewater treatment system maintenance

We provide comprehensive services related to wastewater treatment, from survey / diagnosis of wastewater treatment system to design, procurement / construction, operation / maintenance.

Company Name

SANICON Co., Ltd.

Company Web Page

(blank)

Technology Web Page

<https://www.sanicon.co.jp/>

Type

- Sustainable water supply
- Maintaining Health, Sanitation
- Capacity building

Form

- Service
- Engineering

Sector - Category - Sub-Category

- Water Environment, Water Resources
 - Water supply
 - Water purification

Cost Range (K USD)

- < 10

Countries with Track Record

- Vietnam, Laos

Track Record

- Introduced in developing countries by themselves
- Introduced in developing countries supported by public finance

Potential User

- Communities
- Policy makers
- Private sector

SDGs

- 6. Clean water and sanitation

Target of Adaptation

- Quality of Life, Industry

Adaptation Measures Levels

- Protect

Time Scale

Current, Future (Short Term)
